MetFlame™ Wind resistance, blows away ceramics or screens

MetFlame™ Corrosion resistant metal alloy provide stable, long life

"Temperature That You Can See"

MetFlame™ from Porvair Advanced Materials

MetFlame™ from **Porvair Advanced Materials** is a robust, high efficiency infrared burner that is capable of producing even cooking temperatures up to 2100F instantly and can be turned down from searing intensity to simmering temperatures. It is chip and crack proof. **MetFlame™** cannot thermal shock! It is robust enough for the toughest residential, commercial cooking, or space heating applications.

The unique, fine porosity, low density, tortuous structure and tough metal alloy composition of **MetFlame™** provides many operational advantages simply not possible with common ported ceramics.

It is available in a wide range of geometries to meet any application requirement.

To discuss how the technical and commercial advantages of **MetFlame™** can put “Temperature That You Can See” in your home/commercial grill or space heating appliance, please contact Porvair Advanced Materials.
